MPAI Conformance Testing

Compression and Understanding of Financial Data MPAI-CUI

V1

WARNING

Use of the technologies described in this Technical Specification may infringe patents, copyrights or intellectual property rights of MPAI Members or non-members.

MPAI and its Members accept no responsibility whatsoever for damages or liability, direct or consequential, which may result from use of this Technical Specification.

Readers are invited to review Annex 2 – Notices and Disclaimers.

1 Introduction

Moving Picture, Audio and Data Coding by Artificial Intelligence (MPAI) is an [international Standards Developing Organisation](#) with the mission to develop *AI-enabled data coding standards*. Research has shown that data coding with AI-based technologies is generally *more efficient* than with existing technologies. Compression and feature-based description are notable examples of coding.

In the following, Terms beginning with a capital letter are defined in *Table 1* if they are specific to this MPAI-CUI Conformance Testing and to *Table 2* if they are common to all MPAI Standards. MPAI Application Standards enable the development of AI-based products, applications and services. The MPAI AI Framework (AIF) Standard (MPA-AIF) provides the foundation on which the technologies defined by MPAI Application Standards operate.

Figure 1 depicts the MPAI-AIF Reference Model. This Introduction introduces only the basic processing elements called AI Modules (AIM) making up the AI Workflows (AIW).

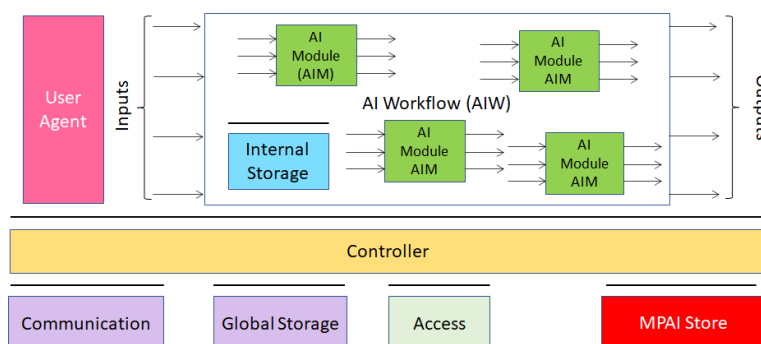

Figure 1 – The AI Framework (AIF) Reference Model and its Components

MPAI Application Standards normatively specify Semantics and Format of the input and output data and the Function of the AIW and the AIMs, and the Connections between and among the AIMs of an AIW.

In particular, an AIM is defined by its Function and Data, but not by its internal architecture, which may be based on AI or data processing, and implemented in software, hardware or hybrid software and hardware technologies.

MPAI defines Interoperability as the ability to replace an AIF, an AIW or an AIM Implementation with a functionally equivalent Implementation. MPAI also defines 3 Interoperability Levels of an AIF that executes an AIW. The AIW may be:

1. Proprietary and composed by AIMs with proprietary functions using any proprietary data Format (*Level 1*).
2. Composed of AIMs having all their Functions, Formats and Connections specified by an MPAI Application Standard (*Level 2*).
3. Composed of AIMs that have the characteristics of point 2. above and certified by an MPAI-appointed Assessor to possess the attributes of Reliability, Robustness, Replicability and Fairness – collectively called Performance (*Level 3*).

MPAI is the root of trust of the MPAI Ecosystem [1] offering Users access to the promised benefits of AI with a guarantee of increased transparency, trust and reliability as the Interoperability Level of an Implementation moves from 1 to 3. Additional information is provided by Annex 3.

2 Scope of MPAI-CUI Conformance Testing

This document specifies the procedure, the tools, the process and the data to be used to Test the Conformance of an Implementation with the MPAI-CUI Technical Specification.

The current version of MPAI-CUI Conformance Testing has been developed by the MPAI *Compression and Understanding of Industrial Data* Development Committee (CUI-DC).

MPAI may decide to produce new Versions of the MPAI-CUI Conformance Testing specification.

3 Terms and definitions

The Terms used in this Conformance Testing specification that are specific of MPAI-CUI and whose first letter is capital have the meaning defined in *Table 1*. The general MPAI Terms are defined *Table 2*.

Table 1 – MPAI-CUI Terms

Term	Definition
Business Discontinuity	An interruption of the operations of a company for a period of time less than 2% of the Prediction Horizon.
Company Default	The status of a company who has failed to make full and timely payments on its obligations.
Cyber Risk	Risk of financial loss, disruption, or damage, caused by the failure of the digital technologies due to unauthorised access, use, disclosure, disruption, modification, or destruction of the systems.
Financial Features	A set of indexes and ratios computed using financial statement data.
Financial Statement	Data produced based on a set of accounting principles driving maintenance and reporting of company accounts so that financial statements can be consistent, transparent, and comparable across companies.

Governance Features	A set of indexes/parameters that are used to assess the adequacy of the organisational model.
Risk Assessment	Attributes indicating the internal company assessment to identify and measure potential or existing Vertical Risks, and their impact on Business Continuity.
Risk Matrix	Table composed of two rows for the risks (cyber and seismic) and four columns for the characteristics (occurrence, business impact, gravity and risk retention) as evaluated by the company.
Seismic Risk	The measure of the possible losses associated with the behavior of a building or structure in likely earthquakes [10].
Vertical Risk	A risk that must be understood in a specific context/domain of the business.

5 Conformance Assessment

5.1 Introduction

An Implementation of the MPAI-CUI Technical Specification [3] offers users the means to predict how well a company will perform in the future using an AI Workflow (AIW) of AI Modules (AIM) executed in an AI Framework (AIF). An Implementation of the AI-based Company Performance Prediction (CPP) Use Case of MPAI-CUI is Interoperable in the sense that it is possible to replace

an AIM of the Implementation with another AIM having the same Interoperability Level and retain the functionality of the AI Workflow (AIW) that Implements the CPP Use Case.

Figure 2 depicts the Reference Model of Company Performance Prediction (CPP) Use Case of MPAI-CUI.

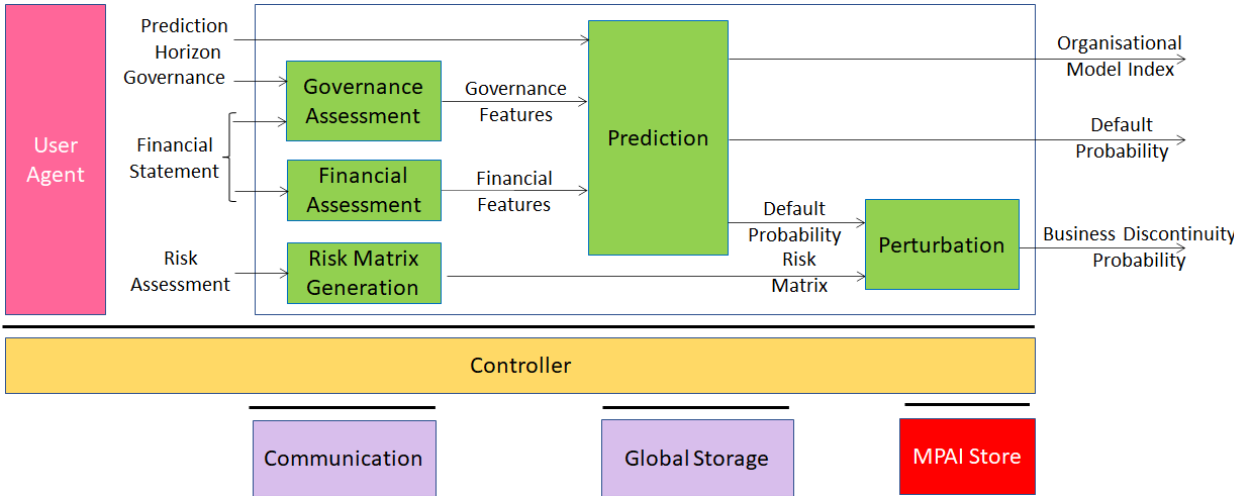

Figure 2 – The Reference Model of Company Performance Prediction

5.2 Definition of CUI-CPP Conformance Testing

Conformance Testing offers the Means to detect whether the AIMs and/or the AIW have been implemented in a way that does not guarantee that the Semantics and the Format of the output data are consistent with the Normative clauses of the MPAI-CUI Technical Specification [3]. Conformance Testing is carried out on the all AIMs part of the the CUI-CPP AIW and the AIW itself.

CUI-CPP Conformance Testing is carried out using files downloadable from the [MPAI website](#). This is a temporary location while the MPAI Store is being established.

- CUI-CPP ConfTest 3 input files to AIW.zip
- CUI-CPP ConfTest Features.xlsx
- CUI-CPP ConfTest Prediction Outputs.zip
- CUI-CPP ConfTest Perturbation Output.zip

5.3 Process of CUI-CPP Conformance Testing

5.3.1 Financial Assessment

The Financial Assessment AIM is tested by:

1. Feeding the AIM with the *CUI-CPP ConfTest 3 input files to AIW.zip* containing the Financial Statements of the set of 9 companies.
2. Computing the Financial Features as indicated in Section 6.1.5 of [3].
3. Comparing the output values of the Financial Features sheet in the file *CUI-CPP ConfTest Features.xlsx*.

The individual output values provided by the AIM under test should not have an error greater than 10⁻² compared with the Financial Features sheet in the file *CUI-CPP ConfTest Features.xlsx*.

After the Tests, Conformance Tester shall fill out the form below.

Conformance Tester ID	Unique Conformance Tester Identifier assigned by MPAI
Standard, Use Case ID and Version	Standard ID and Use Case ID, and version of the standard in the form “CUI:CPP:1:0”.

Name of AIM	Financial Assessment.
Implementer ID	Unique Implementer Identifier assigned by MPAI Store.
AIM Implementation version	Unique Implementation Identifier assigned by Implementer.
Neural Network version*	Unique Neural Network Identifier assigned by Implementer.
Test ID	Unique Test Identifier assigned by Conformance Tester.
Actual output	Actual output provided as a vector of Financial Features.
Execution time*	Duration of test execution.
Test comment*	Comments on test results and possible needed actions.
Date	Date of assessment yyyy/mm/dd.

* This is a temporary solution while the MPAI Store is being established.

** Optional field

5.3.2 Governance Assessment

The Governance Assessment AIM is tested by:

1. Feeding the AIM with the *CUI-CPP ConfTest 3 input files to AIW.zip* containing the Governance data of the set of 9 companies.
2. Computing the Governance Features as indicated in Section 6.1.6 of [3].
3. Comparing the output values of the Governance Features sheet in the file *CUI-CPP ConfTest Features.xlsx*.

The individual output values provided by the AIM under test should not have an error greater than 10^{-2} compared with the Governance Features sheet in the file *CUI-CPP ConfTest Features.xlsx*.

After the Tests, Conformance Tester shall fill out the form below.

Conformance Tester ID	Unique Conformance Tester Identifier assigned by MPAI
Standard, Use Case ID and Version	Standard ID and Use Case ID, and version of the standard in the form "CUI:CPP:1:0".
Name of AIM	Governance Assessment
Implementer ID	Unique Implementer Identifier assigned by MPAI Store.
AIM Implementation version	Unique Implementation Identifier assigned by Implementer.
Neural Network version*	Unique Neural Network Identifier assigned by Implementer.
Test ID	Unique Test Identifier assigned by Conformance Tester.
Actual output	Actual output provided as vector of Governance Assessment.
Execution time*	Duration of test execution.
Test comment*	Comments on test results and possible needed actions.
Date	Date of assessment yyyy/mm/dd.

* This is a temporary solution while the MPAI Store is being established.

** Optional field

5.3.3 Risk Matrix Generation

The operation of the Risk Matrix Generation AIM does not require to be Tested for Conformance. The *CUI-CPP ConfTest 3 input files to AIW.zip* contains the Risk Assessment data of set of 9 companies.

5.3.4 Prediction

The Prediction AIM is tested, in the specified Prediction Horizon of 36 months, by:

1. Feeding the AIM with the Financial Features and Governance Features in the file *CUI-CPP ConfTest Features.xlsx*.
2. Computing the Company Default Probability (see section 6.1.8 of [3]).
3. Computing the Organisational Model Index (see Section 6.1.9 of [3]).
4. Comparing the output values with the vector of the file *CUI-CPP ConfTest Prediction Outputs.zip*.

The individual output values provided by the AIM under test should not have an error greater than 10^{-2} compared with the *CUI-CPP ConfTest Prediction Outputs.zip*.

After the Tests, Conformance Tester shall fill out the form below.

Conformance Tester ID	Unique Conformance Tester Identifier assigned by MPAI.
Standard, Use Case ID and Version	Standard ID and Use Case ID, and version of the standard in the form “CUI:CPP:1:0”.
Name of AIM	Prediction.
Implementer ID	Unique Implementer Identifier assigned by MPAI Store.
AIM Implementation version	Unique Implementation Identifier assigned by Implementer.
Neural Network version*	Unique Neural Network Identifier assigned by Implementer.
Test ID	Unique Test Identifier assigned by Conformance Tester.
Actual output	Actual output provided as vector of probability of company default and adequacy of the organization model values.
Execution time*	Duration of test execution.
Test comment*	Comments on test results and possible needed actions.
Date	Date of assessment yyyy/mm/dd.

* This is a temporary solution while the MPAI Store is being established.

** Optional field

5.3.5 Perturbation

The Perturbation AIM is tested by:

1. Feeding the AIM with the Company Default Probability in the file *CUI-CPP ConfTest Prediction Outputs.zip* and the Risk Matrix.
2. Computing the Company Discontinuity Index (see Section 6.1.10 of [3]).
3. Comparing the output values with the vector of the file *CUI-CPP ConfTest Perturbation Output.zip*.

The individual output values provided by the AIM under test should not have an error greater than 10^{-2} compared with the *CUI-CPP ConfTest Perturbation Output.zip*.

After the Tests, Conformance Tester shall fill out the form below.

Conformance Tester ID	Unique Conformance Tester Identifier assigned by MPAI.
Standard, Use Case ID and Version	Standard ID and Use Case ID, and version of the standard in the form “CUI:CPP:1:0”.
Name of AIM	Perturbation.
Implementer ID	Unique Implementer Identifier assigned by MPAI Store.
AIM Implementation version	Unique Implementation Identifier assigned by Implementer.
Neural Network version*	Unique Neural Network Identifier assigned by Implementer.
Test ID	Unique Test Identifier assigned by Conformance Tester.

Actual output	Actual output provided as a value related to the probability of an interruption.
Execution time*	Duration of test execution.
Test comment*	Comments on test results and possible needed actions.
Date	Date of assessment yyyy/mm/dd.

* *This is a temporary solution while the MPAI Store is being established.*

** *Optional field*

5.3.6 AI Workflow

The entire workflow is tested, in the specified Prediction Horizon of 36 months, by:

1. Feeding the AIM with the *CUI-CPP ConfTest 3 input files to AIW.zip* containing the Financial Statement, Governance data and Risk Matrix of the set of 9 companies.
2. Computing the Financial Features, Governance Features successfully tested according to Sections 5.3.1, 5.3.2, and 5.3.3, respectively, and Risk Matrix.
3. Computing the Company Default Probability (see section 6.1.8 of [3]).
4. Computing the Organisational Model Index (see Section 6.1.9 of [3]).
5. Computing the Business Discontinuity Probability.
6. Comparing the output values generated by the AI Workflow
 - a. In points 3. and 4. above with the vectors in *CUI-CPP ConfTest Prediction Outputs.zip*.
 - b. In point 5. above with the vector in *CUI-CPP ConfTest Perturbation Output.zip*.

The individual output values provided by the AIW under test should not have an error greater than 8%.

After the Tests, Conformance Tester shall fill out the form below.

Conformance Tester ID	Unique Conformance Tester Identifier assigned by MPAI.
Standard, Use Case ID and Version	Standard ID and Use Case ID, and version of the standard in the form "CUI:CPP:1:0".
Name of AIW	Company Performance Prediction.
Implementer ID	Unique Implementer Identifier assigned by MPAI Store.
AIW Implementation version	Unique Implementation Identifier assigned by Implementer.
Neural Network version*	Unique Neural Network Identifier assigned by Implementer.
Test ID	Unique Test Identifier assigned by Conformance Tester.
Actual output	Actual output provided as a value related to the probability of an interruption.
Execution time*	Duration of test execution .
Test comment*	Comments on test results and possible needed actions.
Date	Date of assessment yyyy/mm/dd.

* *This is a temporary solution while the MPAI Store is being established.*

** *Optional field*

Annex 1 – MPAI-wide terms and definitions (Normative)

The Terms used in this standard whose first letter is capital and are not already included in *Table 1* are defined in *Table 2*.

Table 2 – MPAI-wide Terms

Term	Definition
Access	Static or slowly changing data that are required by an application such as domain knowledge data, data models, etc.
AI Framework (AIF)	The environment where AIWs are executed.
AI Module (AIM)	A data processing element receiving AIM-specific Inputs and producing AIM-specific Outputs according to its Function. An AIM may be an aggregation of AIMs.
AI Workflow (AIW)	A structured aggregation of AIMs implementing a Use Case receiving AIM-specific inputs and producing AIM-specific outputs according to its Function.
Application Standard	An MPAI Standard designed to enable a particular application domain.
Channel	A connection between an output port of an AIM and an input port of an AIM. The term “connection” is also used as synonymous.
Communication	The infrastructure that implements message passing between AIMs
Component	One of the 7 AIF elements: Access, Communication, Controller, Internal Storage, Global Storage, MPAI Store, and User Agent
Conformance	The attribute of an Implementation of being a correct technical Implementation of a Technical Specification.
Conformance Tester	An entity authorised by MPAI to Test the Conformance of an Implementation.
Conformance Testing	The normative document specifying the Means to Test the Conformance of an Implementation.
Conformance Testing Means	Procedures, tools, data sets and/or data set characteristics to Test the Conformance of an Implementation.
Connection	A channel connecting an output port of an AIM and an input port of an AIM.
Controller	A Component that manages and controls the AIMs in the AIF, so that they execute in the correct order and at the time when they are needed
Data Format	The standard digital representation of data.
Data Semantics	The meaning of data.
Ecosystem	The ensemble of the following actors: MPAI, MPAI Store, Implementers, Conformance Testers, Performance Testers and Users of MPAI-AIF Implementations as needed to enable an Interoperability Level.
Explainability	The ability to trace the output of an Implementation back to the inputs that have produced it.
Fairness	The attribute of an Implementation whose extent of applicability can be assessed by making the training set and/or network open to testing for bias and unanticipated results.
Function	The operations effected by an AIW or an AIM on input data.
Global Storage	A Component to store data shared by AIMs.
Internal Storage	A Component to store data of the individual AIMs.
Identifier	A name that uniquely identifies an Implementation.

Implementation	<ol style="list-style-type: none"> 1. An embodiment of the MPAI-AIF Technical Specification, or 2. An AIW or AIM of a particular Level (1-2-3) conforming with a Use Case of an MPAI Application Standard.
Interoperability	The ability to functionally replace an AIM with another AIM having the same Interoperability Level
Interoperability Level	<p>The attribute of an AIW and its AIMs to be executable in an AIF Implementation and to:</p> <ol style="list-style-type: none"> 1. Be proprietary (Level 1) 2. Pass the Conformance Testing (Level 2) of an Application Standard 3. Pass the Performance Testing (Level 3) of an Application Standard.
Knowledge Base	Structured and/or unstructured information made accessible to AIMs via MPAI-specified interfaces
Message	A sequence of Records transported by Communication through Channels.
Normativity	The set of attributes of a technology or a set of technologies specified by the applicable parts of an MPAI standard.
Performance	The attribute of an Implementation of being Reliable, Robust, Fair and Replicable.
Performance Assessment	The normative document specifying the procedures, the tools, the data sets and/or the data set characteristics to Assess the Grade of Performance of an Implementation.
Performance Assessment Means	Procedures, tools, data sets and/or data set characteristics to Assess the Performance of an Implementation.
Performance Assessor	An entity authorised by MPAI to Assess the Performance of an Implementation in a given Application domain
Profile	A particular subset of the technologies used in MPAI-AIF or an AIW of an Application Standard and, where applicable, the classes, other subsets, options and parameters relevant to that subset.
Record	A data structure with a specified structure
Reference Model	The AIMs and their Connections in an AIW.
Reference Software	A technically correct software implementation of a Technical Specification containing source code, or source and compiled code.
Reliability	The attribute of an Implementation that performs as specified by the Application Standard, profile and version the Implementation refers to, e.g., within the application scope, stated limitations, and for the period of time specified by the Implementer.
Replicability	The attribute of an Implementation whose Performance, as Assessed by a Performance Assessor, can be replicated, within an agreed level, by another Performance Assessor.
Robustness	The attribute of an Implementation that copes with data outside of the stated application scope with an estimated degree of confidence.
Scope	The domain of applicability of an MPAI Application Standard
Service Provider	An entrepreneur who offers an Implementation as a service (e.g., a recommendation service) to Users.
Standard	The ensemble of Technical Specification, Reference Software, Conformance Testing and Performance Assessment of an MPAI application Standard.
Technical Specification	(Framework) the normative specification of the AIF.

	<p>(Application) the normative specification of the set of AIWs belonging to an application domain along with the AIMs required to Implement the AIWs that includes:</p> <ol style="list-style-type: none"> 1. The formats of the Input/Output data of the AIWs implementing the AIWs. 2. The Connections of the AIMs of the AIW. 3. The formats of the Input/Output data of the AIMs belonging to the AIW.
Testing Laboratory	A laboratory accredited by MPAI to Assess the Grade of Performance of Implementations.
Time Base	The protocol specifying how Components can access timing information
Topology	The set of AIM Connections of an AIW.
Use Case	A particular instance of the Application domain target of an Application Standard.
User	A user of an Implementation.
User Agent	The Component interfacing the user with an AIF through the Controller
Version	A revision or extension of a Standard or of one of its elements.

Annex 2 - Notices and Disclaimers Concerning MPAI Standards (Informative)

The notices and legal disclaimers given below shall be borne in mind when [downloading](#) and using approved MPAI Standards.

In the following, “Standard” means the collection of four MPAI-approved and [published](#) documents: “Technical Specification”, “Reference Software” and “Conformance Testing” and, where applicable, “Performance Testing”.

Life cycle of MPAI Standards

MPAI Standards are developed in accordance with the [MPAI Statutes](#). An MPAI Standard may only be developed when a Framework Licence has been adopted. MPAI Standards are developed by especially established MPAI Development Committees who operate on the basis of consensus, as specified in Annex 1 of the [MPAI Statutes](#). While the MPAI General Assembly and the Board of Directors administer the process of the said Annex 1, MPAI does not independently evaluate, test, or verify the accuracy of any of the information or the suitability of any of the technology choices made in its Standards.

MPAI Standards may be modified at any time by corrigenda or new editions. A new edition, however, may not necessarily replace an existing MPAI standard. Visit the [web page](#) to determine the status of any given published MPAI Standard.

Comments on MPAI Standards are welcome from any interested parties, whether MPAI members or not. Comments shall mandatorily include the name and the version of the MPAI Standard and, if applicable, the specific page or line the comment applies to. Comments should be sent to the [MPAI Secretariat](#). Comments will be reviewed by the appropriate committee for their technical relevance. However, MPAI does not provide interpretation, consulting information, or advice on MPAI Standards. Interested parties are invited to join MPAI so that they can attend the relevant Development Committees.

Coverage and Applicability of MPAI Standards

MPAI makes no warranties or representations of any kind concerning its Standards, and expressly disclaims all warranties, expressed or implied, concerning any of its Standards, including but not limited to the warranties of merchantability, fitness for a particular purpose, non-infringement etc. MPAI Standards are supplied “AS IS”.

The existence of an MPAI Standard does not imply that there are no other ways to produce and distribute products and services in the scope of the Standard. Technical progress may render the technologies included in the MPAI Standard obsolete by the time the Standard is used, especially in a field as dynamic as AI. Therefore, those looking for standards in the Data Compression by Artificial Intelligence area should carefully assess the suitability of MPAI Standards for their needs.

IN NO EVENT SHALL MPAI BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: THE NEED TO PROCURE SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF

THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

MPAI alerts users that practicing its Standards may infringe patents and other rights of third parties. Submitters of technologies to this standard have agreed to licence their Intellectual Property according to their respective Framework Licences.

Users of MPAI Standards should consider all applicable laws and regulations when using an MPAI Standard. The validity of Conformance Testing is strictly technical and refers to the correct implementation of the MPAI Standard. Moreover, positive Performance Assessment of an implementation applies exclusively in the context of the [MPAI Governance](#) and does not imply compliance with any regulatory requirements in the context of any jurisdiction. Therefore, it is the responsibility of the MPAI Standard implementer to observe or refer to the applicable regulatory requirements. By publishing an MPAI Standard, MPAI does not intend to promote actions that are not in compliance with applicable laws, and the Standard shall not be construed as doing so. In particular, users should evaluate MPAI Standards from the viewpoint of data privacy and data ownership in the context of their jurisdictions.

Implementers and users of MPAI Standards documents are responsible for determining and complying with all appropriate safety, security, environmental and health and all applicable laws and regulations.

Copyright

MPAI draft and approved standards, whether they are in the form of documents or as web pages or otherwise, are copyrighted by MPAI under Swiss and international copyright laws. MPAI Standards are made available and may be used for a wide variety of public and private uses, e.g., implementation, use and reference, in laws and regulations and standardisation. By making these documents available for these and other uses, however, MPAI does not waive any rights in copyright to its Standards. For inquiries regarding the copyright of MPAI standards, please contact the [MPAI Secretariat](#).

The Reference Software of an MPAI Standard is released with the [MPAI Modified Berkeley Software Distribution licence](#). However, implementers should be aware that the Reference Software of an MPAI Standard may reference some third party software that may have a different licence.

Annex 3 – The Governance of the MPAI Ecosystem (Informative)

Level 1 Interoperability

With reference to *Figure 1*, MPAI issues and maintains a standard – called MPAI-AIF – whose components are:

1. An environment called AI Framework (AIF) running AI Workflows (AIW) composed of inter-connected AI Modules (AIM) exposing standard interfaces.
2. A distribution system of AIW and AIM Implementation called MPAI Store from which an AIF Implementation can download AIWs and AIMs.

Implementers' benefits	Upload to the MPAI Store and have globally distributed Implementations of
	- AIFs conforming to MPAI-AIF.
	- AIWs and AIMs performing proprietary functions executable in AIF.
Users' benefits	Rely on Implementations that have been tested for security.
MPAI Store's role	- Tests the Conformance of Implementations to MPAI-AIF.
	- Verifies Implementations' security, e.g., absence of malware.
	- Indicates unambiguously that Implementations are Level 1.

Level 2 Interoperability

In a Level 2 Implementation, the AIW must be an Implementation of an MPAI Use Case and the AIMs must conform with an MPAI Application Standard.

Implementers' benefits	Upload to the MPAI Store and have globally distributed Implementations of
	- AIFs conforming to MPAI-AIF.
	- AIWs and AIMs conforming to MPAI Application Standards.
Users' benefits	- Rely on Implementations of AIWs and AIMs whose Functions have been reviewed during standardisation.
	- Have a degree of Explainability of the AIW operation because the AIM Functions and the data Formats are known.
Market's benefits	- Open AIW and AIM markets foster competition leading to better products.
	- Competition of AIW and AIM Implementations fosters AI innovation.
MPAI Store's role	- Tests Conformance of Implementations with the relevant MPAI Standard.
	- Verifies Implementations' security.
	- Indicates unambiguously that Implementations are Level 2.

Level 3 Interoperability

MPAI does not generally set standards on how and with what data an AIM should be trained. This is an important differentiator that promotes competition leading to better solutions. However, the performance of an AIM is typically higher if the data used for training are in greater quantity and more in tune with the scope. Training data that have large variety and cover the spectrum of all cases of interest in breadth and depth typically lead to Implementations of higher "quality".

For Level 3, MPAI normatively specifies the process, the tools and the data or the characteristics of the data to be used to Assess the Grade of Performance of an AIM or an AIW.

Implementers' benefits	May claim their Implementations have passed Performance Assessment.
Users' benefits	Get assurance that the Implementation being used performs correctly, e.g., it has been properly trained.
Market's benefits	Implementations' Performance Grades stimulate the development of more Performing AIM and AIW Implementations.

- MPAI Store's role - Verifies the Implementations' security
- Indicates unambiguously that Implementations are Level 3.

The MPAI ecosystem

The following is a *Figure 3* high-level description of the MPAI ecosystem operation applicable to fully conforming MPAI implementations:

1. MPAI establishes and controls the not-for-profit MPAI Store (step 1).
2. MPAI appoints Performance Assessors (step 2).
3. MPAI publishes Standards (step 3).
4. Implementers submit Implementations to Performance Assessors (step 4).
5. If the Implementation Performance is acceptable, Performance Assessors inform Implementers (step 5a) and MPAI Store (step 5b).
6. Implementers submit Implementations to the MPAI Store (step 6); The Store Tests Conformance and security of the Implementation.
7. Users download Implementations (step 7).

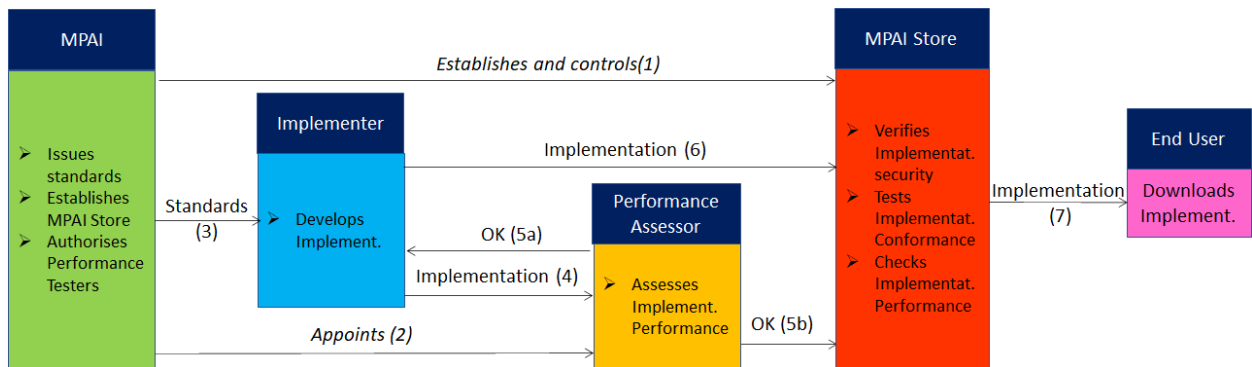

Figure 3 – The MPAI ecosystem operation
